

CASE STUDY: FLOODGATE @ JT ATKINSON

As the leading supplier of Kitemarked “off the shelf” flood protection products in the UK, we are aware of the need to offer affordable, easy to install products that do not alter the fabric of the properties they are protecting.

With no one property being exactly the same, we are also aware of the need for people to examine the product and discuss their requirements, prior to purchasing.

Over the past 3 years, Floodgate has been working closely with a dedicated team from JT Atkinson builders’ merchants in Penrith, to help supply the local community with a range of products to suit all their flood protection requirements.

Deploying Floodgate on flood warning

The collaboration has so far successfully supplied over 1,000 units to various government bodies, companies and individuals in the Cumbria and North West area.

Contracts of note include the supply of over 400 units to properties in Carlisle, Keswick and Cockermouth owned and administered by Impact Housing Association and Derwent and Solway Housing Association, 25+ units to the Police headquarters in Penrith and station in Appleby and 30+ units to United Utilities to help protect the Willowholme substation in Penrith.
